this book constitutes the revised selected papers from the 4th international workshop on machine learning and interpretation in neuroimaging mlini 2014 held in montreal qc canada in december 2014 as a satellite event of the 11th annual conference on neural information processing systems nips 2014 the 10 mlini 2014 papers presented in this volume were carefully reviewed and selected from 17 submissions they were organized in topical sections named networks and decoding speech clinics and cognition and causality and time series in addition the book contains the 3 best papers presented at mlini 2013

this is a small book on algebra where the stress is laid on the structure of fields hence its title you will hear about equations both polynomial and differential and about the algebraic structure of their solutions for example it has been known for centuries how to explicitly solve polynomial equations of degree 2 baby nians many centuries ago 3 scipione del ferro tartaglia cardan around the 1500s and even 4 cardan ferrari xvi century using only algebraic operations and radicals  $n$ th roots however the case of degree 5 remained unsolved until abel showed in 1826 that a general equation of degree 5 cannot be solved that way soon after that galois defined the group of a polynomial equation as the group of permutations of its roots say complex roots that preserve all algebraic identities with rational coefficients satisfied by these roots examples of such identities are given by the elementary symmetric polynomials for it is well known that the coefficients of a polynomial are up to sign elementary symmetric polynomials in the roots in general all relations are obtained by combining these but sometimes there are new ones and the group of the equation is smaller than the whole permutation group galois understood how this symmetry group can be used to characterize the solvability of the equation he defined the notion of solvable group and showed that if the group of the equation is solvable then one can express its roots with radicals and conversely

this book enriches our views on representation and deepens our understanding of its different aspects it arises out of several years of dialog between the editors and the

authors an interdisciplinary team of highly experienced researchers and it reflects the best contemporary view of representation and reality in humans other living beings and intelligent machines structured into parts on the cognitive computational natural sciences philosophical logical and machine perspectives a theme of the field and the book is building and presenting networks and the editors hope that the contributed chapters will spur understanding and collaboration between researchers in domains such as computer science philosophy logic systems theory engineering psychology sociology anthropology neuroscience linguistics and synthetic biology
